REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the claimed invention is allowed over the prior art of record because the prior art does not show the claimed sealing member disposed near the peripheral section of the adhesive layer to seal the adhesive layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

EXAMINER' AMENDMENT/COMMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

A new abstract is provided and replaced the abstract filed on 8/20/03 to arrange the text of the abstract in a single paragraph.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kazama et al (US 5,567,267), Wang et al (US 6,538,872), Nozawa et al (US 5,290,381), Furuya et al (US 6,084,215) and Ishii (US 5,851,298).

New Abstract

A susceptor device comprises a susceptor base body, a temperature controlling section, an adhesive layer which attaches the susceptor base body and the temperature controlling section unitarily, an O-ring which is disposed near a peripheral section of the adhesive layer, a circular O-ring which is disposed on a bottom surface of the temperature controlling section, an O-ring supporting section which surrounds the temperature controlling section and compresses the O-rings on the temperature controlling section, and pushup screws which push up and fix the O-ring supporting section toward the temperature controlling section. By doing this, it is possible to protect the adhesive layer from an external environment. Also, it is possible to provide a susceptor device having a superior temperature controlling characteristics for the plate sample, operational stability, and durability.
